

## HENRY USA BUILDS FIRST DX CHILLER!

Henry Technologies Inc. is pleased to announce a new product launch for its Chatham operations. The Chil-Con range of EM series DX chillers are known for solid design and excellent performance, as well as a highly technical support structure, to back up the company's long established reputation for quality and design.

Henry's Chatham operations has long links to the industry, stretching back into the 70's when it traded as AC&R Components Inc. Chatham's skilled team of engineers and manufacturers have worked with the engineers at Chil-Con Products of Brantford, ON to bring the Chiller design to the USA.

Speaking about the transition, Sales manager Nate Beckman said “This is an opportunity for Henry to compete in the USA in a highly technical and traditionally robust market.”

DX Chillers are used in many applications, from large tonnage air conditioners and supermarket frozen foods, to ice rinks and large food distribution warehouses.

...that's **COOL!**
